

2015 OUTCOME VALIDATION STUDY

What is it?:

The outcome study looks at how our patients have done since their discharge in 2015. We have looked at how patients are functioning since discharge from NRI for the past 10 years.

Why is it important?:

The outcome study can help provide you a look into how other patients are doing since they were discharged from NRI. Some of these patients went to other facilities and some went home. It can give you information to help give you hope and to plan for the future.

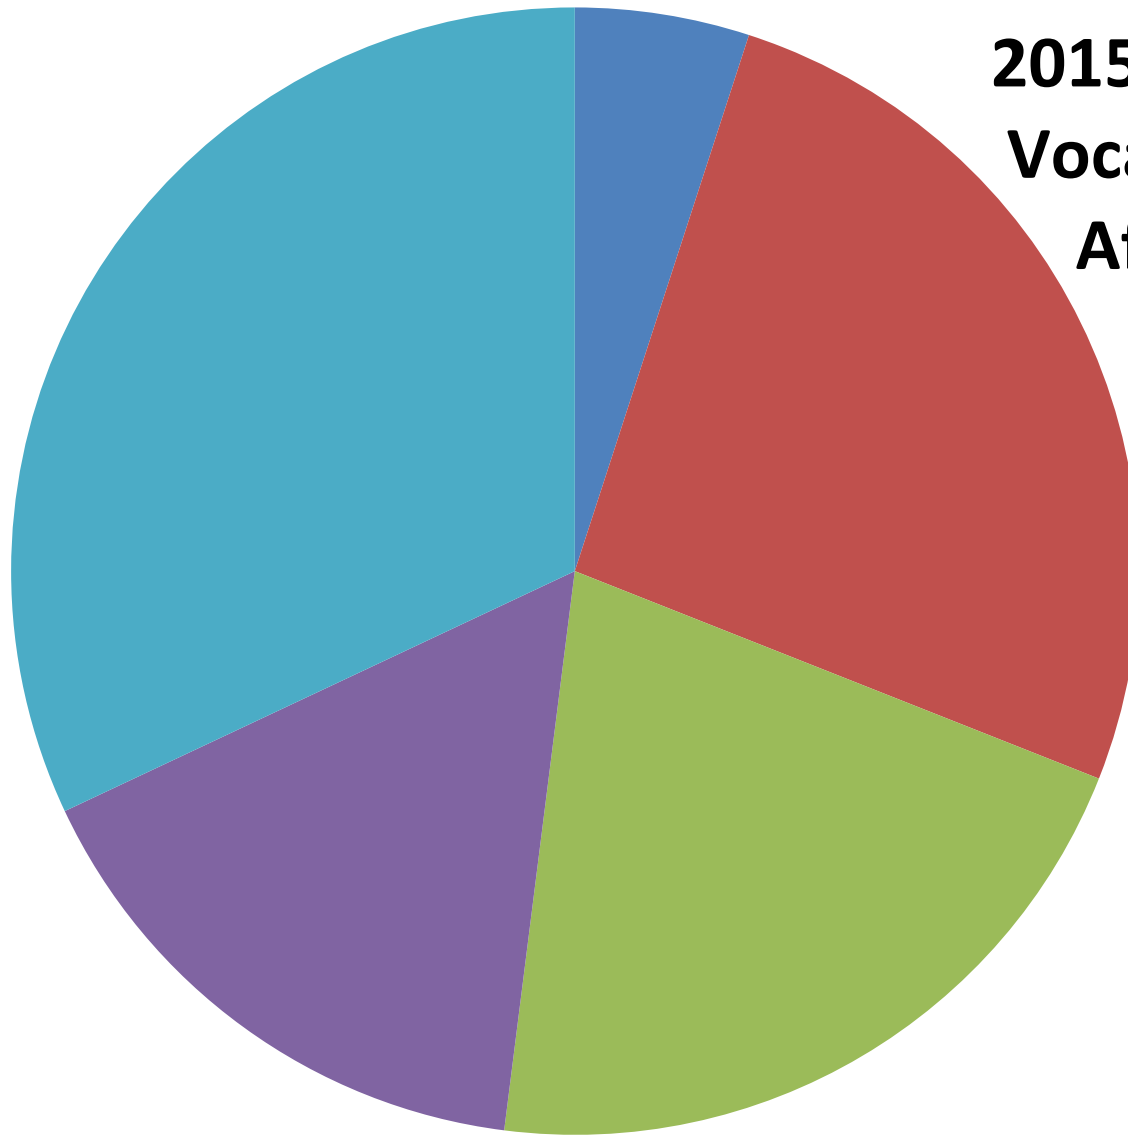

Do patients get better?

That's a fair question to ask. Yes, there is evidence that patients get better following their treatment at Brookhaven Hospital NRI.

Last year 19 patients discharged from NRI.

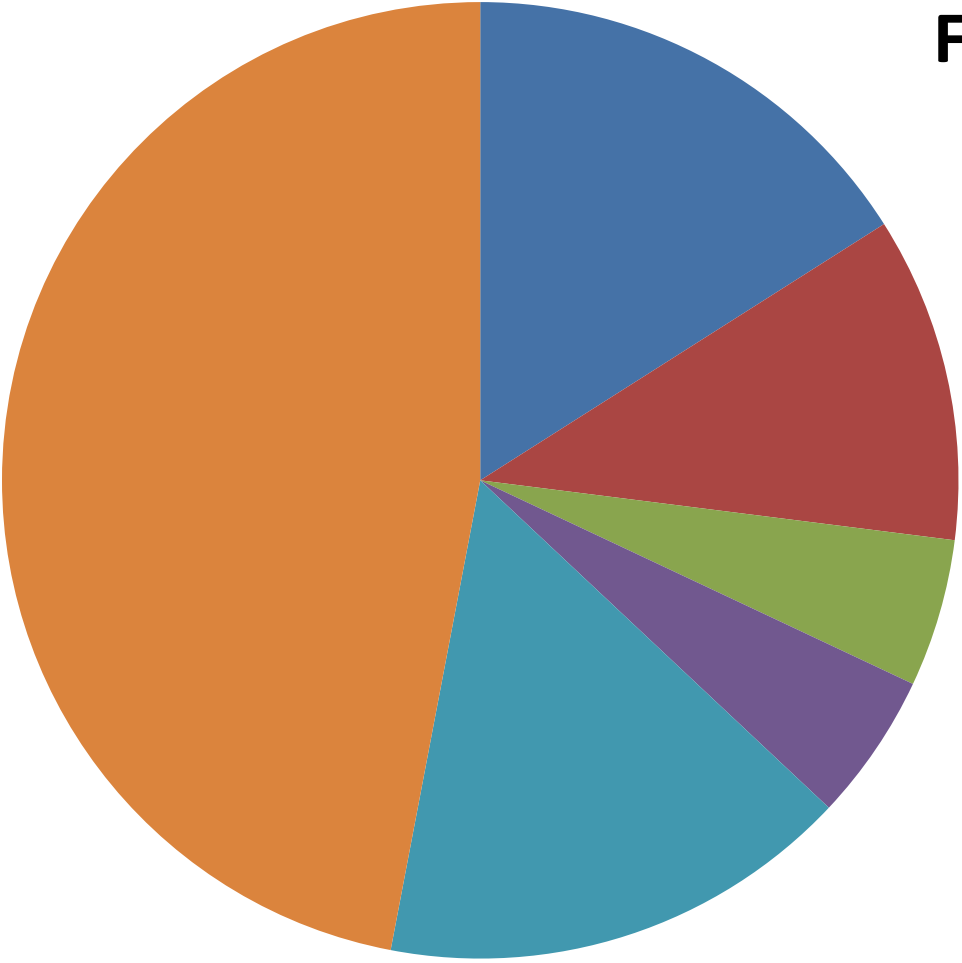

- ❖ **Approximately 8 patients left to live back at home or in a group home.**
- ❖ **Approximately 6 of those patients can work or volunteer regularly.**
- ❖ **On average, patients did better on test scores before they left NRI that looks at how well they were doing before and after they came to NRI.**

2015 Outcome Study Vocational Re-entry After Discharge

- Return to Work or School
- Volunteer Work
- Workshop Program
- Unable to Work
- 24 hr Supervision

Social Re-entry Following Discharge

- Return Home Alone
- Return Home with Family
